Subject: Final Lower Subbase (Operable Unit 4) Soil and Groundwater Pre-Design Investigation
Completion Report and Feasibility Study Addendum
Naval Submarine Base-New London, Groton, Connecticut

Dear Mr. O'Connor:

Please find enclosed two hard copies and two electronic copies (CDs) of the subject document for your records. Copies of the document were also distributed to the other members of the Naval Submarine Base – New London team per the distribution list provided below for their records.

The following information is included in each hard copy and electronic copy:

- Distribution Letter
- Environmental Protection Agency (EPA) RTC Document (Revision 3, January 6, 2012)
- Volume I – Sections 1 through 6 (Text, Tables, and Figures)
- Volume II – Appendices A through E
- Volume III – Appendices F through K

The final Lower Subbase Soil and Groundwater Completion Report and Feasibility Study (FS) Addendum was prepared to address comments received from EPA on the draft final version of the report. Revisions were made per the attached RTC document. CTDEP did not provide any comments on the draft final report. Major issues addressed in this revision include the following:

- Sediment Alternatives SD-6, SD-7, and SD-8: LUCs and monitoring were added to these alternatives. Appropriate changes were made to the text, tables, and cost estimates.
- Boundaries for Zones 2 and 3 were modified so that lead-contaminated soil was contained in Zone 3. Appropriate changes were made to the text, tables, figures, and appendices.

If you have any questions regarding the enclosed document, please contact me at (412) 921-8984.
